

Module 3, Touchpoint 1

Role play activity

Characters: ANM, ASHA, Sofia, PHC-MO

Ms. Sofia, a 28-year-old woman in her 30th week of pregnancy, visits a Village Health and Nutrition Day (VHND) session. ANM diagnosed her as case of severe anemia (hemoglobin 5 g/dL) .

Below is a dialogue exchange between the characters –

ANM to ASHA: Sofia had severe anaemia. She is in third trimester. I had requested you to bring her to the HWC for further investigations and treatment. Why didn't you bring her?

ASHA: I had brought her while you were away to another village. But the MLHP said that the Hb apparatus is out of order so he just gave IFA tablets without the test.

Sofia (meekly): I feel very weak and tired all the time. I requested MLHP to write a note for the doctor in the PHC. But he said don't worry, take this medicine and you will be fine in few days

ANM: Ok, let me take her to the PHC. Come Sofia, we will consult the medical officer, let me call him and ask his availability.

ANM calls the PHC medical officer: Sir are you in hospital? I want to bring an antenatal case with severe anaemia.

PHC MO: Today I am at the district headquarter for DHS meeting, then I have three days training at the state level. After that I am busy with a high-profile visit. Call me later

ANM to Sofia: Look, I tried my best to help you.

After few days ASHA meets ANM: I have to share the unfortunate news of Sofia's death

ANM: Oh my god, what happened?

ASHA: When she had labour pains, her family took her to the District Hospital. I accompanied them. After delivery, Sofia had profuse bleeding. Her Haemoglobin had dropped further. The doctors tried everything, even blood transfusion, but could not save her.

ANM and ASHA look at each other sadly and say May be that was God's wish!

ANM ASHA-na a.gana: Sofia de bilongen an.chi komia. Biade An.no dong.a bonkamachipaksajok. Nang.ko ang.a a.ganachimba biko check up rimbabo ine. Na.ara maina rimbaja?
